

Water

Water Wise Presentation
Kiama Emergence Yoga
26 April 2019 @ 6- 8pm

EARTH2WATER

Content

- What is water & where does it come from?
- Drinking water : Lab tests & guidelines, which containers to use & why.
- Holistic methods for health and well-being.
- Environmental pollution: conservation, waste reduction & restoration work.

Objectives

- Raising awareness - interconnection of our natural and built environments.
- Improve water management.
- Restore rivers and aquifers.
- Protect our oceans and marine ecosystems.
- Educating our children on how to live in harmony with the earth.

Combining science & holistic methods to solve our global pollution issues; Microplastics & chemicals in our drinking water, rivers & ocean.

Why is water so important for our health, environment, economy & future generations?

About; Dino Parisotto

My passion is to educate the community about protecting water.

Water is Life. Water is part of all life forms on this planet. Water is the fabric that binds us all together.

For the past 25 years as a consultant, I have conducted many environmental investigations on clean & contaminated sites in Australia for the Government, industrial clients and community.

Laboratory analyses of some ~100,000 samples (soil, water, air) from over 1,000 sites to investigate environmental impacts in our communities.

Much is to be said about the 'lessons' learned from experience in the contaminated site industry (i.e. state of soil-water pollution in our community).

My purpose is to 'pass on' what has been learned from investigating contaminated sites and to provide solutions to assist communities, industry and Government to reduce our 'toxic footprints'.

My professional qualifications include: Geology Honours Degree, Masters Degree Groundwater, NSW/ACT drillers licence, Certification as an Environmental Practitioner (general and site contamination specialist).
