Environmental & Groundwater Consulting

Earth2Water's Custom Drilling Rigs

Earth2Water's mobile auger rigs (MARs) are designed to drill boreholes and install monitoring wells in difficult terrain and restricted access (including indoor areas).

Drilling works & the environmental services (soil logging, well construction, sample collection, pump testing etc.) are combined and performed by Earth2Water. Dino Parisotto (Class 3 driller & CEnvP Site Contamination Specialist) has over 25 years experience with drilling & environmental projects on a broad range of contaminated land projects in NSW/ACT.

Benefits of our drilling equipment (3 rigs) include:

- Suitable for installing gas/groundwater wells<10m
- Concrete coring equipment available
- Light weight equipment- 200 kg,450 kg,1.4 tonne
- Virtually no track marks;
- Access over difficult terrain or tight access (e.g 1.1m width, 2.3m mast height with small rigs)
- Cost effective via combining the drilling and environmental services;
- Soil sample collection by soil corers, push tubes and variable sized augers.
